I know a few of you here are very savvy with regards to webcasting. Can you help me out? What kind of bandwidth do I need? Our church is going to webcast prayer at the Square on the 20th and I need some help on this. Thanks in advance. by the way, Chris and Mike and any other SF Bay Area residents here are very welcome to join us on the 20th.

Just use [www.ustream.tv](http://www.ustream.tv)

you need just a simple high-speed connection.

Thanks greg. Sorry I wasn't clear. We currently don't have any connection and I need to know what kind of bandwidth we need to stream the video from NY.

It's in the works but I don't want to get more bandwidth than we need because it costs more.

Just a standard 1.5M DSL line or a cable modem connection should work just fine.
