SermonIndex Support :: downloading videos

downloading videos - posted by Lysa (), on: 2010/3/26 7:36

I realize this may be a silly question but this morning I was not able to download a video "like" I download an mp3 sermon.

I right click on the title and then click on 'save target as' and another window comes up but this one says:
File name: 'photo'
Save as type: HTML Document

I've downloaded videos before and I don't remember doing anything different than for mp3's; but today it was!

What am I doing wrong? I am using IE8 with Vista (if that is important).

Thank you for your help, this is probably so simple!!!

God bless you!
