Women of Christianity Website help - posted by StarofG0D (), on: 2016/12/17 14:28

Hello,

I've been running this Wordpress site(womenofchristianity.com) for a few years now. One of the important plugins suddenly became unavailable. It seems the only way to fix it would be to do some coding, which I don't know how to do. :)

Is there anyone out there that would be willing to take this on? This website gets 200+ visitors a day. It might not take much time, but it might. I am not sure. The Plugin I had organized the posts onto pages. So now there are pages without any links to articles on each page.

I'd be up for a complete platform change as well, to Joomla or something.

Many thanks in the Lord,

Michelle
