Resurrecting Dead People Using Stem Cells Given The Green Light - posted by sermonindex (), on: 2017/3/11 6:27

Scientists are getting ethical permission from health watchdogs to resurrect dead people by using a combination of regeneration therapies. Starting this year, the groundbreaking Project Reanima will primarily use stem cells to stimulate the regrowth of neurons in clinically dead patients. Bioquark Inc., an American biotech company, is one of medical companies given the green light to conduct the trials on 20 brain dead patients from traumatic injuries.

Leading the team is Dr Himanshu Bansal, Indian specialist who works with Biotech companies Revita Life Sciences and Bioquark Inc,. The team will use a combination of therapies, which include injecting the brain with stem cells and a cocktail of peptides, as well as deploying lasers and nerve stimulation techniques. The procedure has been shown to bring patients out of comas.

The resurrection technique using stem cells will test whether parts of ...
