I experienced a 403 error on this site and I thought that the UK servers were going to block this site
I do computer science and I wonder whether if there is any other get around other than a VPN !

Dear brother,

It was a PHP issue on the host server I believe, are you still experiencing this, it happened the other day and it seems to be fixed. I also thought it was a VPN work around issue and that certain IP's were blocked but in reality it blocked out all web traffic.
